

Imagine the future with "Premier"

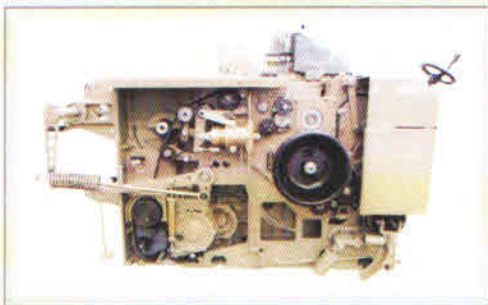

Water Jet Loom

PREMIER

LOOM

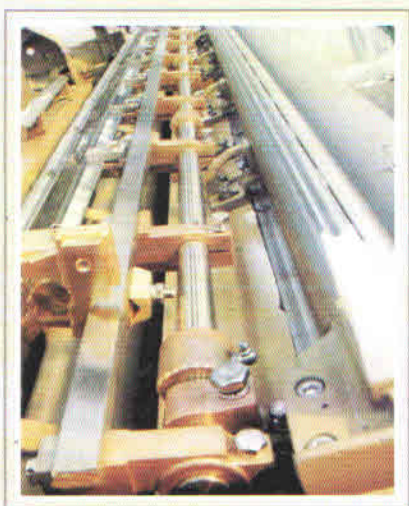

- Premier high-speed water jet loom is suitable for high twisted, heavy-density, high-quality fabrics weaving, include curtain, tablecloth, umbrella cloth, vestee, home textile fabrics and all kinds of heavy fabrics which made of the POY, FTY, DTY, twisted yarn, spandex covered yarn from 20D to 1800D.

- Premier high-speed water jet loom with mechanical let-off and take-up or electronic let-off and take-up. The buyer can choose any system as per their requestment.

- Improved design Nozzles & Electronic Feeder gives Steady Weft Insertion.

- Company engineer researched the Japanese machine's beating-up motion system and design the better system, not only operating high speed and smooth, but also the axis is rigid. It can ensure the fabrics do not have filling bar.

- Premier high speed water jet loom still adopt the protector for the reed, Japanese machine has already removed the protector for saving the cost. If without protector, the reed will be damaged quickly.

- Premier company try our best to produce the high speed water jet loom with perfect cost performance & always keep improving !
